Fiber Housing

The box placed on the outside of your home; it is where the fiber will come into your home.

A Drop

The fiber line that connects your home to the mainline fiber. After this step is completed, crews will clean up disturbed dirt and plant grass seed as needed.

Drop Plow

This is used to 'knife' in the fiber line on property where it is sod or dirt.

A partnership project of Evertek & TCA

All About Fiber Construction

Directional Boring Machine

Machine used to 'tunnel' under streets, sidewalks and for other purposes in order to cause the least disruption possible to the ground during construction.

Conduit

The orange plastic tube that is placed under ground; its purpose is to protect the fiber optic cable. The fiber is pulled inside the conduit.

Fiber Building

A building (similar to the one at left) will house electronics & other equipment which we will use to bring fiber to your home.
